## **First Global Symposium on Farmers' Rights**

HYEYA IAS

**Context:** The President of India, Smt Droupadi Murmu, inaugurated the first 'Global Symposium on Farmers' Rights' (GSFR) at the ICAR Convention Centre, National Agricultural Science Centre, New Delhi.

- > Indian farmers received awards recognizing their contributions to plant diversity under the PPVFR Act, 2001.
- > 'Plant Authority Bhawan' and an online plant variety 'Registration Portal' were inaugurated.
- > Union Minister of Agriculture emphasized the vital role of farmers in preserving agricultural heritage.
- > President highlighted India's diversity and farmers as primary food producers.
- > GSFR was organized in collaboration with agricultural research organizations, including ICAR.
- > India leads in including Farmers' Rights in Plant Variety Registration.
- > The symposium aimed to promote Farmers' Rights under the International Treaty on Plant Genetic Resources.
- > Over 700 delegates from 59 countries participated, including policy makers, scientists, and farmer representatives.
- GSFR aimed to recognize farmers as conservers of agrobiodiversity and global food security guardians.

#### Protection of Plant Varieties and Farmers' Rights Act, 2001

- > Objectives:
  - To establish an effective system for the protection of plant varieties, the rights of farmers and plant breeders, and to
    encourage the development of new varieties of plants.
  - To accelerate agricultural development in the country, protect plant breeders' rights, stimulate investment for research and development both in the public and private sectors for the development of new plant varieties.
  - Facilitate the growth of the seed industry in the country, ensuring the availability of high-quality seeds and planting material to farmers.
- Rights:
  - Breeders' Rights:
    - Exclusive rights for production, sale, distribution, import, and export of protected varieties.
    - Ability to appoint agents or licensees and pursue legal action for rights violations.
  - Researchers' Rights:
    - Exclusive rights for production, sale, distribution, import, and export of protected varieties.
    - Ability to appoint agents or licensees and pursue legal action for rights violations.
  - Farmers' Rights:
    - Registration and protection for farmers who create new varieties.
    - Option to register farmer-developed varieties as extant.
    - Farmers can save, use, exchange, share, or sell their farm produce, including protected variety seeds.
    - Eligibility for recognition and rewards for conserving Plant Genetic Resources.
    - Provision for compensation to farmers in case of variety non-performance (Section 39 (2)).
    - No fee payment in proceedings before the Authority, Registrar, Tribunal, or High Court under the Act.

## **Reduction of Carbon emission from Construction**

**Context:** A UN report calls for developing countries to adopt low-carbon building materials to cut greenhouse gas emissions, shifting away from unsustainable construction practices.

### **Objectives of the UN Report**

- Reduce Greenhouse Gas Emissions: Encourage developing countries to shift from unsustainable building practices to lowcarbon building materials to reduce greenhouse gas emissions.
- Highlight Building Growth: Emphasize the rapid expansion of buildings globally, equivalent to the size of Paris every five days.
- Address Sector's Impact: Acknowledge that 37% of global greenhouse gas emissions are attributed to the built environment sector, which includes buildings, distribution systems, roads, and transportation.
- Promote Emission Reduction Strategies: Advocate for the "Avoid-Shift-Improve" approach, focusing on waste reduction, sustainable materials, and improved production methods.

#### Types of Greenhouse Gas Emissions from the Built Environment

- Embodied Emissions: Emissions related to construction, including extraction, manufacturing, transport, and end-of-life demolition.
  - > **Operational Emissions**: Emissions during building use, such as heating, cooling, and electrical consumption.

## **Face to Face Centres**

# DAILY pre PARE Current affairs summary for prelims

# 13 September, 2023

### **Projected Changes in Carbon Emissions**

- Shift in Carbon Sources: Warn of a projected shift from operational emissions (from building use) to embodied carbon emissions (from construction and materials), rising from 25% to 49% by 2050.
- Focus on Existing Buildings: Recommend developed countries prioritize renovating existing buildings, generating significantly fewer emissions compared to new construction.
- Circular Design for New Buildings: Advise incorporating circular design strategies for new construction, enabling the recovery of materials during disassembly or renovation.

### Supply-and-Demand Model for Circular Economies

HYEYA IAS

- Promote Circular Material Cycles: Suggest developing a supply-and-demand model that includes careful disassembly of buildings and the preparation of second-cycle materials for resale.
- Emission Reduction Potential: Mention that G7 countries, China, and India could achieve substantial emissions reductions through the use of recycled materials in residential buildings.

### Principles for Low-Carbon Building Materials

- > Increase Building Lifetimes: Extend the lifetime of buildings to reduce aggregate embodied carbon emissions.
- Utilize Sustainable Bio-Based Materials: Advocate for the use of renewable or reusable sustainable materials, such as mass timber and engineered bamboo, as alternatives to carbon-intensive concrete and steel.
- Decarbonize Energy Supply: Recommend electrifying and decarbonizing energy used in the production and maintenance of materials, buildings, and urban infrastructure.

### **Concrete and Steel Production Solutions**

- Cement Carbon Reduction: Propose reducing the clinker-to-cement ratio and increasing the use of cement alternatives to decarbonize cement production.
- Carbon Capture and Utilization (CCU) Concrete: Explore CCU concrete as a method to store carbon within building materials, with potential benefits and challenges.
- **Steel Reuse**: Promote steel reuse to save energy, reduce demand, and extend building lifetimes.
- Renewable Energy for Aluminium: Advocate for renewable energy use in aluminium production and increased utilization of recycled aluminium.

(Report: https://www.buildingmaterialsandclimate.com/)

## **NDCs of G-20 Countries**

Context: UN Secretary-General Anthonio Guterres urges G-20 leaders to take strong, immediate action on the climate crisis.

- The 2015 Paris Agreement requires all countries to submit updated national climate action plans, known as nationally determined contributions (NDCs), every five years.
- NDCs serve as a roadmap for reducing greenhouse gas (GHG) emissions and are essential for limiting global temperature increases to 1.5°C.
- According to Climate Watch, nearly all G-20 countries, with the exceptions of Russia and Argentina, submitted updated first NDCs between December 2020 and April 2023.
- > Russia had submitted its first NDC in 2020 but hasn't provided an update yet.
- > Argentina submitted its second NDC in November 2021.

## Latest Nationally Determined Contributions of G20 Countries

- > Argentina aims to cap net emissions at 349 metric tonnes of carbon dioxide equivalent (MtCO2e) by 2030.
- > Australia plans to reduce greenhouse gas emissions by 43% below 2005 levels by 2030.
- **Brazil** intends to lower greenhouse gas emissions by 37% in 2025 and 50% in 2030, both compared to 2005 levels.
- **Canada** aims to reduce emissions by 40-45% below 2005 levels by 2030.
- > China is committed to lowering carbon dioxide emissions per unit of GDP by over 65% from the 2005 level by 2030.
- > The EU plans to reduce net domestic greenhouse gas emissions by at least 55% by 2030.
- India aims to reduce emissions intensity of its GDP by 45% by 2030 compared to 2005 levels and achieve 50% cumulative electric power installed capacity from non-fossil fuel-based energy resources by 2030.
- Indonesia seeks to reach emissions of 1,953 MtCO2e (unconditional) and 1,632 MtCO2e (conditional) by 2030.
- > Japan is targeting a 46% reduction in GHG emissions in fiscal year 2030 compared to its fiscal year 2013 levels.
- Mexico aims for a 35% reduction in GHG emissions by 2030.
- **Russia** aims to reduce GHG emissions to 70% of the 1990 level by 2030.
- Saudi Arabia plans to reduce and avoid GHG emissions by 278 million tonnes of carbon dioxide equivalent annually by 2030, with 2019 as the base year.

## Face to Face Centres

# DAILY pre PARE Current affairs summary for prelims

# 13 September, 2023

- South Africa aims to keep GHG emissions within a range of 350-420 MtCO2e in 2030.
- South Korea intends to reduce total national GHG emissions by 40% from the 2018 level by 2030.
- Turkey plans to reduce GHG emissions by 41% through 2030 compared to a business-as-usual scenario based on the 2012 base year.
- > The UK aims to reduce economy-wide GHG emissions by at least 68% by 2030 compared to 1990 levels.
- > The **US** has set an economy-wide target of reducing net GHG emissions by 50-52% below 2005 levels by 2030.

#### What are NDCs?

- > NDC stands for "Nationally Determined Contribution," which is a country's plan to achieve its climate goals.
- > The Paris Agreement, adopted in 2015, outlines the framework for NDCs.
- Article 4, paragraph 2 of the Paris Agreement states that each country must prepare, communicate, and maintain successive NDCs to work towards their climate objectives.
- NDCs are submitted to the United Nations Framework Convention on Climate Change (UNFCCC) secretariat every five years.
- In August 2022, India formally updated its NDC to the UNFCCC, and this update was approved by the Union Cabinet.
- India's updated NDC represents a significant step towards the country's aim to achieve net-zero emissions by the year 2070.

#### **Developments and Observations at G-20 Summit 2023**

HYEYA IAS most trusted since 2003

- G-20 urges developed countries to double climate finance for adaptation by 2025.
- > Next round of NDCs to be informed by COP 28 outcomes.
- > New Delhi Declaration calls for climate-resilient development, lacks specific goals.
- > Focus on aligning NDC targets with Paris Agreement's temperature goals.
- Acknowledgment of climate impacts on women and girls, commitment to their participation.
- > UN Secretary-General calls for strong G-20 action on the climate crisis.
- Many G-20 countries not on track to achieve net-zero emissions.
- Seven G-20 nations responsible for half of global GHG emissions in 2020.
- G-20 collectively accounts for 75% of global GHG emissions.

- 1. Reach non-fossil energy capacity to 500GW by 2030
- 2. Fulfil 50% energy requirements via RE by 2030
- 3. Reduce 1 bn carbon emissions by 2030
- 4. Reduce carbon intensity >45% by 2030
- 5. Achieve the target of Net-Zero by 2070
